- Volume 1 discusses the identification, classification and importance of yeasts in the field of biotechnology.
- Volume 2 focuses on the identification and classification of ascomycetous yeasts.
- Volume 3 deals with the identification and classification of basidiomycetous yeasts, along with the genus Prototheca.

Microbial Diversity in Asia Been Hen Nga,Hai-Meng Tan,Ken-ichiro Suzuki,2001 This work presents results from five years of research on microbial species in exotic and pristine locations in Asian countries, by contributors in food science, microbiology, and agricultural and environmental sciences in the UK, Japan, Singapore, Malaysia, China, Korea, and Philippines. Some microorganisms are described here for the first time. Specific topics include lactic acid bacteria in fermented foods in Southeast Asia, culture collection networks in Asia, high actinomycete diversity in the topical rainforests of Singapore, and engineering biphenyl dioxygenases to acquire wide degradation capabilities of polychlorinated biphenyls and aromatic hydrocarbons. The editor is affiliated with the Department of Microbiology at the National University of Singapore. c. Book News Inc.

The Expanding Realm of Yeast-like Fungi G. S. de Hoog,M. Th Smith,A. C. M. Weijman,1987

Bibliography Pierre Villars,Karin Cenxual,Marinella Penzo,2012-12-21 By browsing about 10 000 000 scientific articles of over 200 major journals mainly in a 'cover to cover approach' some 200 000 publications were selected. The extracted data is part of the following fundamental material research fields: crystal structures (S), phase diagrams (also called constitution) (C) and the comprehensive field of intrinsic physical properties (P). This work has been done systematically starting with the

literature going back to 1900. The above mentioned research field codes (S, C, P) as well as the chemical systems investigated in each publication were included in the present work. The aim of the Inorganic Substances Bibliography is to provide researchers with a comprehensive compilation of all up to now published scientific publications on inorganic systems in only three handy volumes.

Organic Reaction Mechanisms 1987 A. C. Knipe, W. E. Watts, 2008-04-30 The only book series to summarize the latest progress on organic reaction mechanisms, *Organic Reaction Mechanisms*, 1987 surveys the development in understanding of the main classes of organic reaction mechanisms reported in the primary scientific literature in 1987. The 23rd annual volume in this highly successful series highlights mechanisms of stereo-specific reactions. Reviews are compiled by a team of experienced editors and authors, allowing advanced undergraduates, graduate students, postdocs, and chemists to rely on the volume's continuing quality of selection and presentation.

Mass Spectrometry M E Rose, 2007-10-31 Specialist Periodical Reports provide systematic and detailed review coverage of progress in the major areas of chemical research. Written by experts in their specialist fields the series creates a unique service for the active research chemist, supplying regular critical in-depth accounts of progress in particular areas of chemistry. For over 80 years the Royal Society of Chemistry and its predecessor, the Chemical Society, have been publishing reports charting developments in chemistry, which originally took the form of Annual Reports. However, by 1967 the whole spectrum of chemistry could no longer be contained within one volume and the series Specialist Periodical Reports was born. The Annual Reports themselves still existed but were divided into two, and subsequently three, volumes covering Inorganic, Organic and Physical Chemistry. For more general coverage of the highlights in chemistry they remain a 'must'. Since that time the SPR series has altered according to the fluctuating degree of activity in various fields of chemistry. Some titles have remained unchanged, while others have altered their emphasis along with their titles; some have been combined under a new name whereas others have had to be discontinued. The current list of Specialist Periodical Reports can be seen on the inside flap of this volume.

Pulmonary Surfactant Jacques R. Bourbon, 2019-11-11 This book represents a comprehensive update on pulmonary surfactant by merging classical knowledge with new information. Topics include surfactant secretion and alveolar processing and recycling; physical bases and different theoretical models of the physiological mechanism for pulmonary surfactant action; recent findings on surfactant-like material in other organs; developmental processes and multifactorial regulation; etiology and physiopathology of neonatal respiratory distress; and modern methods for functional explorations of the lung in neonates and experimental models in animals. The book also contains a discussion on the management of hyaline membrane

disease, from both the experimental and clinical points of view.

The editor is well-known for his work in exploring, developing, and applying organopalladium chemistry. Contributors include over 24 world authorities in the field.

The Physics and Chemistry of Carbides, Nitrides and Borides R. Freer,2012-12-06 Carbides, nitrides and borides are families of related refractory materials. Traditionally they have been employed in applications associated with engineering ceramics where either high temperature strength or stability is of primary importance. In recent years there has been a growing awareness of the interesting electrical, thermal and optical properties exhibited by these materials, and the fact that many can be prepared as monolithic ceramics, single crystals and thin films. In practical terms carbides, nitrides and borides offer the prospect of a new generation of semiconductor materials, for example, which can function at very high temperatures in severe environmental conditions. However, as yet, we have only a limited understanding of the detailed physics and chemistry of the materials and how the preparation techniques influence the properties. Under the auspices of the NATO Science Committee an Advanced Research Workshop (ARW) was held on the Physics and Chemistry of Carbides, Nitrides and Borides (University of Manchester, 18-22 September, 1989) in order to assess progress to date and identify the most promising themes and materials for future research. An international group of 38 scientists considered developments in 5 main areas: The preparation of powders, monolithic ceramics, single crystals and thin films; Phase transformations, microstructure, defect structure and mass transport; Materials stability; Theoretical studies; Electrical, thermal and optical properties of bulk materials and thin films.

High Energy Physics And Cosmology 1998 - Proceedings Of The Summer School Antonio Masiero,Alexei Smirnov,Goran Senjanovic,1999-07-06 This volume presents introductory lectures on the Standard Model and Higgs physics, as well as QCD. These lectures provided the particle physics background for the main topics of the school: astroparticle physics and modern cosmology.

Chemistry and Biology ,1998-04-18 Chemistry and Biology is a celebration of the outstanding contributions to the field by Professor R.H.F. Manske, who founded the series in 1950. This special volume demonstrates the dramatic changes in alkaloid chemistry since then. It also offers a unique overview of recent developments in major areas of alkaloid chemistry and biology and looks at how these areas will develop in the future. These fourteen contributions are written by many of the leading alkaloid chemists in the world, and thus comprise a unique view of alkaloids and their contributions to the health and well-being of humankind. - Unique contributions from twenty of the world's leading alkaloid chemists - Critical reviews of the major progress in alkaloid chemistry - Considered commentary on the future of alkaloid chemistry - State-of-the-art insight

into the role of alkaloids in the health sciences, biotechnology, and the elucidation of fundamental biological processes

Progress in Heterocyclic Chemistry H. Suschitzky, E. F. V. AAA, 2013-10-22 Progress in Heterocyclic Chemistry Volume 5 deals critically with original material selected essentially from the 1992 heterocyclic literature. Chapters 1 and 2 are given over to reviews: in the first, SO₂ extrusion from five-membered rings is discussed by R.A. Aitken and colleagues, which completes last year's review on this topic. The second review presents a review of 2-acylamino-3-dimethylaminopropenoates in heterocyclic synthesis. The chapters are arranged according to ring sizes as in the previous volumes and are supported by references, numerous diagrams and a subject index.
