## Clifford Stoll

High-Tech Heretic Clifford Stoll,2000-09-12 The cry for and against computers in the classroom is a topic of concern to parents, educators, and communities everywhere. Now, from a Silicon Valley hero and bestselling technology writer comes a pointed critique of the hype surrounding computers and their real benefits, especially in education. In High-Tech Heretic, Clifford Stoll questions the relentless drumbeat for computer literacy by educators and the computer industry, particularly since most people just use computers for word processing and games--and computers become outmoded or obsolete much sooner than new textbooks or a good teacher. As one who loves computers as much as he disdains the inflated promises made on their behalf, Stoll offers a commonsense look at how we can make a technological world better suited for people, instead of making people better suited to using machines.

**New Directions in Reference** Bryon D. Anderson,2012-12-06 Design and deliver traditional reference services in new and innovative ways Librarians work in an environment of constant change created by new technology, budget restraints, inflationary costs, and rising user expectations. New Directions in Reference examines how they can use new and innovative methods to design and deliver traditional reference services in a wide range of settings. The book's contributors relate first-hand experiences in libraries large and small, public and academic, and urban and rural dealing with a variety of changes, including virtual reference, music reference, self-service interlibrary loan, e-mail reference, and copyright law. Change isn't new to libraries but the accelerated pace of change is. Traditional lines that have existed between library departments have been erased and traditional notions about general and specialized reference services have been reconsidered. New Directions in Reference documents how librarians are re-thinking their roles and responsibilities to keep pace with the ongoing process of evolution that borders on revolution. New Directions in Reference examines: the skills needed to manage and evaluate virtual reference services the basics of modern copyright law and the Digital Millennium Copyright Act (DMCA)

the changes in users, sources, and modes of access in music reference services the use of interlibrary loan management software that allows patrons to request, track, and renew borrowed materials online the Ask-A-Librarian e-mail reference service the Government Printing Office and government information online and much more! New Directions in Reference also includes case studies involving the new Martin Luther King Jr. Library in San Jose, California, and the impact of Personal Digital Assistants (PDAs) in providing references services for medical libraries. This important book is an essential professional resource for public, academic, and special librarians, especially those providing reference services.

**The Digital Hand, Vol 3** James W. Cortada, 2008 In The third volume of The Digital Hand, James W. Cortada completes his sweeping survey of the effect of computers on American industry, turning finally to the public sector, and examining how computers have fundamentally changed the nature of work in government and education. This book goes far beyond generalizations about the Information Age to the specifics of how industries have functioned, now function, and will function in the years to come. Cortada combines detailed analysis with narrative history to provide a broad overview of computing and telecommunications role in the entire public sector, including federal, state, and local governments, and in K-12 and higher education. Beginning in 1950, when commercial applications of digital technology began to appear, Cortada examines the unique ways different public sector industries adopted new technologies, showcasing the manner in which their innovative applications influenced other industries, as well as the U.S. economy as a whole. He builds on the surveys presented in the first volume of the series, which examined sixteen manufacturing, process, transportation, wholesale and retail industries, and the second volume, which examined over a dozen financial, telecommunications, media, and entertainment industries. With this third volume, The Digital Hand trilogy is complete, and forms the most comprehensive and rigorously researched history of computing in business since 1950, providing a detailed picture of what the infrastructure of the Information Age really looks like and how we got there. Managers, historians, economists, and those working in the public sector will appreciate Cortada's analysis of digital technology's many roles and future possibilities.

**The Cuckoo's Egg** Cliff Stoll, 2024-07-02 In this white-knuckled true story that is "as exciting as any action novel" (The New York Times Book Review), an astronomer-turned-cyber-detective begins a personal quest to expose a hidden network of spies that threatens national security and leads all the way to the KGB. When Cliff Stoll followed the trail of a 75-cent accounting error at his workplace, the Lawrence Berkeley National Laboratory, it led him to the presence of an unauthorized user on the system. Suddenly, Stoll found himself crossing paths with a hacker named "Hunter" who had managed to break into sensitive United States networks and steal vital information. Stoll made the dangerous decision to begin a one-man hunt of his own: spying on the spy. It was a high-stakes game of deception, broken codes, satellites, and missile bases, one that eventually gained the attention of the CIA. What started as simply observing soon became a game of cat and mouse that ultimately reached all the way to the KGB.

Silicon Snake Oil Clifford Stoll,1996-03-01 In *Silicon Snake Oil*, Clifford Stoll, the best-selling author of *The Cuckoo's Egg* and one of the pioneers of the Internet, turns his attention to the much-heralded information highway, revealing that it is not all it's cracked up to be. Yes, the Internet provides access to plenty of services, but useful information is virtually impossible to find and difficult to access. Is being on-line truly useful? Few aspects of daily life require computers...They're irrelevant to cooking, driving, visiting, negotiating, eating, hiking, dancing, speaking, and gossiping. You don't need a computer to...recite a poem or say a prayer. Computers can't, Stoll claims, provide a richer or better life. A cautionary tale about today's media darling, *Silicon Snake Oil* has sparked intense debate across the country about the merits--and foibles--of what's been touted as the entranceway to our future.

Heretics and Heroes Thomas Cahill,2013-10-29 The New York Times bestselling author of *How the Irish Saved Civilization* reveals how the innovations of the Renaissance and the Reformation changed the Western world. • “Cahill is our king of popular historians.” —The Dallas Morning News This was an age in which whole continents and peoples were discovered. It was an era of sublime artistic and scientific adventure, but also of newly powerful princes and armies—and of unprecedented courage, as thousands refused to bow their heads to the religious pieties of the past. In these exquisitely written and lavishly illustrated pages, Cahill illuminates, as no one else can, the great gift-givers who shaped our history—those who left us a world more varied and complex, more awesome and delightful, more beautiful and strong than the one they had found.

Living Literacy Michael Rose,2015-10-30 In *Living Literacy* Michael Rose maps out how our command of the written word is threatened by inappropriate electronic media and fundamental flaws in the education system. He investigates the nature of literacy and how it relates to child development, and examines what really works in preparing for and teaching literacy. His wise and thoughtful book will help teachers and parents to prepare children for the transition to literacy through conversation, story, song and play, ensuring that formal reading and writing are introduced in a relevant and living way.

*The Internet Playground* Ellen Seiter,2005 Based on four years of experience teaching computers to 8-12 year olds, media scholar Ellen Seiter offers parents and educators practical advice on what children need to know about the Internet and when they need to know it. *The Internet Playground* argues that, contrary to the promises of technology boosters, teaching with computers is very difficult. Seiter points out that the Internet today resembles a mall more than it does a library. While children love to play online games, join fan communities, and use online chat and instant messaging, the Internet is also an appallingly aggressive marketer to children and, as this book passionately argues, an educational boondoggle.

**Class Warfare** J Martin Rochester,2002-12-01 *Class Warfare: Besieged Schools, Bewildered Parents, Betrayed Kids and the Attack on Excellence* offers a first-hand account of the Great American Education War being waged from coast to coast,

including the reading wars, math wars, testing wars, and other schoolyard scuffles reported almost daily by the nation's media. Martin Rochester takes the reader on a field trip that begins with his own upper-middle class suburban school district in St. Louis and then moves on to inner-city locales and some of the best private schools, in showing how "pack pedagogy" has steamrolled parent resistance in promoting disasters such as whole-language, fuzzy math, multiple intelligences theory, teacher-as-coach, the therapeutic classroom, and all the other latest fads found in today's schools. A college professor, Rochester became deeply involved in public education as a result of his children's misadventures in the classroom. After several years of trying to improve the status quo as a dogged volunteer, he graduated from involved parent to informed critic of a system in which "progressive" educators continue to assault the techniques of traditional schooling (ability-grouping, grades, homework, etc), allow nonacademic diversions to crowd out academic study, and subordinate a commitment to excellence to an obsession with "equity." As a result of his experiences, Rochester concludes that all children are being victimized, not only the most gifted, but especially "average" students and those lower achieving kids whose needs are now supposedly driving the entire curriculum. Martin Rochester began as a concerned parent and wound up creating a fever chart of what is wrong in our nation's classrooms.

**Recapturing Technology for Education** Mark Gura,Bernard Percy,2005 Despite significant investment of funds, time, and effort in bringing computers, the Internet, and related technologies into our classrooms, educators have turned their back on these new power tools of the intellect. School is the last remaining institution to keep 21st Century technology at arms distance. How can technology be used to enrich and enhance traditional approaches to instruction? How does it move teaching into new territory? What actions need to be taken in order to successfully transform our schools to effective, technology-supported learning environments? Why has this happened and what can be done to reverse it? *Recapturing Technology for Education* answers these questions. It re-establishes the legitimacy and urgency of tapping technology to make our schools relevant and effective once again. This book explores the reasons why educators have resisted making the leap to a technology-supported brand of teaching and learning, and it will provide an education worthy of 21st Century children. Includes: Interviews and quotes of experts in the field, References, reviews, and recommendations of free resources available to educators. Written for both education professionals and lay persons, it will also be useful to all who are interested in understanding Instructional Technology and unleashing its potential to positively impact.

**An Education System Worthy of Malaysia** Bakri Musa,2003 Malaysia's highly centralized and tightly controlled system of education fails in educating and integrating the young. It is also ill suited for a plural society. Instead of the present rigid and uniform system, the writer calls for one that is flexible and diverse, but with a core of commonality. There should also be private sector participation to provide competition and spur innovation. Achieving this requires radically changing the

ministry of education from one obsessed with strict top-down command, to a more democratized model with power and responsibilities delegated to the periphery. The minister is less a drill sergeant barking out orders to his raw recruits but more of a symphony conductor coaxing the best out of his skilled musicians. The reforms suggested here will make Malaysians fluently bilingual in Malay and English, science literate, and mathematically competent, as well as foster a common Malaysian identity.
