Ice Binding Proteins Ran Drori,Corey Stevens,2023-11-09 This volume provides methods to study ice-binding proteins (IBPs), and applications involving these proteins. Chapters are divided into three parts describing identifying, isolating, and purifying ice-binding proteins, characterize both IBPs and ice-nucleating proteins (INPs), and synthesize mimics of IBPs, as well as applications involving these proteins. Written in the format of the highly successful Methods in Molecular Biology series, each chapter includes an introduction to the topic, lists necessary materials and reagents, includes tips on troubleshooting and known pitfalls, and step-by-step, readily reproducible protocols. Authoritative and cutting-edge, Ice Binding Proteins: Methods and Protocols aims to provide both experimental and simulations protocols to help new researchers, break-the-ice, and enter this exciting field, while also supporting established researchers broaden the scope of their investigations.

Virtual Screening for Chemists Ishika Saha,Patrick G. Harran,2021-07-30 Virtual Screening for Chemists focuses the discussion on principles underlying the most widely used methods for virtual screening today. References for more technical details have been provided where relevant. The authors have paid special attention to highlighting resources that are readily accessible to the academic community and hope these will facilitate your research aims. Demonstrative workflows have been

included at the end of the e-book to allow you to familiarize yourself with the general steps involved in a virtual library screening pipeline. Familiarity with basic python and command line interface may be helpful in these examples, but scripts and execution instructions have been provided to guide you through the entire workflow. The input datasets used in the demonstrative examples are derived from the authors' in-house virtual library, but the exercises may be adapted to other datasets of the reader's choice.

Overcoming Obstacles in Drug Discovery and Development Kan He, Paul F. Hollenberg, Larry C. Wienkers, 2023-05-18 Overcoming Obstacles in Drug Discovery and Development uses real-world case studies to illustrate how critical thinking and problem solving skills are applied in the discovery and development of drugs. It also shows how developing critical thinking to overcome issues plays an essential role in the process. Modern drug discovery and development is a highly complex undertaking that requires scientific and professional expertise to be successful. After the identification of a molecular entity for treating a medical condition, challenges inevitably arise during the subsequent development to understand and characterize the biological profile; feedback from scientists is used to fine-tune the molecular entity to obtain an effective and safe product. In this process, the discovery team may identify unexpected safety issues and new medical disorders for treatment by the molecular entity. Invariably inherent in this complex undertaking are miscues, mistakes, and unexpected problems that can derail development and throw timetables into disarray, potentially leading to failure in the development of a medically useful drug. Addressing critical unexpected problems during development often requires scientists to utilize critical thinking and imaginative problem-solving skills. Overcoming Obstacles in Drug Discovery and Development will be essential to young scientists to help learn the skills to successfully face challenges, learn from mistakes, and further develop critical thinking skills. It will also be beneficial to experienced researchers who can learn from the case studies of successful and unsuccessful drug development. - Provides real-world case studies in drug discovery and the development of drugs - Illustrates the use of critical thinking and problem solving in approaching preclinical and clinical problems in drug discovery and development - Illustrates and analyses examples of successes and failures in drug discovery and development that have not previously been reported

Sorting Things Out Geoffrey C. Bowker, Susan Leigh Star, 2000-08-25 A revealing and surprising look at how classification systems can shape both worldviews and social interactions. What do a seventeenth-century mortality table (whose causes of

death include fainted in a bath, frightened, and itch); the identification of South Africans during apartheid as European, Asian, colored, or black; and the separation of machine- from hand-washables have in common? All are examples of classification—the scaffolding of information infrastructures. In *Sorting Things Out*, Geoffrey C. Bowker and Susan Leigh Star explore the role of categories and standards in shaping the modern world. In a clear and lively style, they investigate a variety of classification systems, including the International Classification of Diseases, the Nursing Interventions Classification, race classification under apartheid in South Africa, and the classification of viruses and of tuberculosis. The authors emphasize the role of invisibility in the process by which classification orders human interaction. They examine how categories are made and kept invisible, and how people can change this invisibility when necessary. They also explore systems of classification as part of the built information environment. Much as an urban historian would review highway permits and zoning decisions to tell a city's story, the authors review archives of classification design to understand how decisions have been made. *Sorting Things Out* has a moral agenda, for each standard and category valorizes some point of view and silences another. Standards and classifications produce advantage or suffering. Jobs are made and lost; some regions benefit at the expense of others. How these choices are made and how we think about that process are at the moral and political core of this work. The book is an important empirical source for understanding the building of information infrastructures.

Labs of Our Own Sig / Sara Giordano, 2025-02-11 From climate change to COVID-19 to reproductive justice, there has been deep political polarization around science. *Labs of Our Own* provides a unique entry point into these twenty-first-century science wars by focusing on our affective relationships to science. The book delves into various sites where scientists, teachers, artists, and activists claim to create more democratic access to science—from DIY biology community labs to feminist classrooms to activist science practitioners. The reader will find that these claims for and attempts at democratic sciences not only impact what counts as science and who counts as a scientist but reconfigure who is included in the proper public. Instead of arguing for a knee-jerk defense of science against right-wing attacks, *Labs of Our Own* builds the case for a feminist, antiracist, decolonial, queer science tinkering practice that intentionally, politically, and ethically acts to produce new challenges to the definition and boundaries of the human.

Laboratory Studies in Biology Chester Alvin Lawson, 1955

Cryptid: Discovery Douglas Roff, 2016-06-01 About the Book Adam St. James, software genius and savant Chief Technologist of the massive US federal DataLab Project, had just returned to his home in Barrows Bay, British Columbia from Tucson, Arizona. He had spent the better part of the past month working on a pro bono assignment for his father's friend Peter Berg, Regional Director of the FBI, working out of the Seattle field office. His favor for the FBI was to secure the mother lode and holy grail of the FBI's Joint Organized Crime Task Force that Berg believed he had accidentally stumbled

upon. Mere fortuity had led him to what he thought was fifty years or more of Mafia financial books and records detailing organized criminality from Seattle to Miami and all points in between. What Adam found was nothing even remotely resembling what Regional Director Berg was looking for. It had been a small clerical error made by a temp transposing a letter or two in a last name that led Adam St. James to his incredible discovery. But this discovery was too incredible, too massive to even contemplate as being authentic. Adam himself did not believe it could be true. Would he be proven correct or was the truth just immeasurably stranger than fiction? If Adam had accidentally stumbled upon a great discovery, it would mean that he had fortuitously confirmed the existence of the cryptid of all cryptids. Had Adam found scientific and verifiable proof of the existence of an unknown species of creatures capable of transforming into human form? Or was this some immense practical joke designed to annoy and embarrass him and his father, noted forensic archeologist and author, Edward St. James? They live among us. The journey is fantastic, the discovery, if true, immense. But will Adam and his eclectic family survive this discovery? Will humanity? Murder, intrigue, deception, treachery, lust and betrayal all come together in the Cryptid Trilogy as mankind faces off against an unknown species bent on its total destruction as the dominant species on the planet. Adam reveals his amazing natural abilities as he seeks to understand and control them. How will this saga end?
