Resolution Frameworks for Islamic Banks Elsie Addo Awadzi, Carine Chartouni, Mario Tamez, 2015-11-24 Islamic banking is growing rapidly and its potential impact on global financial stability cannot be underestimated. International standards for resolving banks have evolved after the global financial crisis, culminating in the Financial Stability Board's ("FSB") Key Attributes of Effective Resolution Regimes for Financial Institutions. This paper examines the applicability of the Key Attributes to the resolution of Islamic banks. It concludes that a number of issues would need to be addressed, owing to Islamic banks' unique governance structures and balance sheets. It recommends international guidance for the design of robust Shari'ah-compliant resolution frameworks for jurisdictions with Islamic banks.

Discussions in Dispute Resolution Art Hinshaw, Andrea Kupfer Schneider, Sarah Rudolph Cole, 2021-04-13 While arbitration was robust in colonial and early America, dispute resolution lost its footing to the court system as the United States grew into a bustling and burgeoning country. And while dispute resolution processes emerged briefly from time to time, they were dormant until the enactment of the Federal Arbitration Act and collective bargaining grew out of the labor movement. But it wasn't until 1976, when Frank Sander delivered his famous remarks at the Pound Conference, that the modern dispute resolution movement was born. By the year 2000, alternative dispute resolution had transformed from a populist rebellion against the judicial system to mainstream legal practice. Today, lawyers and retiring judges look to arbitration and mediation for a career pivot, and law schools train law students in the finer arts of dispute resolution practice as both providers and advocates. *Discussions in Dispute Resolution* brings together the modern dispute resolution field's most influential commentaries in its first few decades and reflects on what makes these pieces so important. This book collects 16 foundational writings, four pieces from each of the field's primary subfields--negotiation, mediation, arbitration, and public policy. Each piece has four commenters who answer the question: why is this work a foundational piece in the dispute resolution field? The purpose in asking this simple question is fourfold: to hail the field's foundational generation and

their work, to bring a fresh look at these articles, to engage the articles' original authors where possible, and to challenge the articles with the benefit of hindsight. Where possible, the book gives the authors of the original pieces the opportunity either to reflect on the piece itself or to respond to the other commenters.

Super-Resolution Microscopy Udo J. Birk, 2017-12-04 This unique book on super-resolution microscopy techniques presents comparative, in-depth analyses of the strengths and weaknesses of the individual approaches. It was written for non-experts who need to understand the principles of super-resolution or who wish to use recently commercialized instruments as well as for professionals who plan to realize novel microscopic devices. Explaining the practical requirements in terms of hardware, software and sample preparation, the book offers a wealth of hands-on tips and practical tricks to get a setup running, provides invaluable help and support for successful data acquisition and specific advice in the context of data analysis and visualization. Furthermore, it addresses a wide array of transdisciplinary fields of applications. The author begins by outlining the joint efforts that have led to achieving super-resolution microscopy combining advances in single-molecule photo-physics, fluorophore design and fluorescent labeling, instrument design and software development. The following chapters depict and compare current main standard techniques such as structured illumination microscopy, single-molecule localization, stimulated emission depletion microscopy and multi-scale imaging including light-sheet and expansion microscopy. For each individual approach the experimental setups are introduced, the imaging protocols are provided and the various applications illustrated. The book concludes with a discussion of future challenges addressing issues of routine applications and further commercialization of the available methods. Guiding users in how to make choices for the design of their own experiments from scratch to promising application, this one-stop resource is intended for researchers in the applied sciences, from chemistry to biology and medicine to physics and engineering.

High-Resolution Mass Spectroscopy for Phytochemical Analysis Sreeraj Gopi, Augustine Amalraj, Shintu Jude, 2021-09-30

This new volume provides a bird's-eye view of the properties, utilization, and importance of high resolution mass spectrometry (HRMS) for phytochemical analysis. The book discusses the new and state-of-the-art technologies related to HRMS in phytochemical analysis for the food industry in a comprehensive manner. Phytochemical characterization of plants is important in the food and nutraceutical industries and is also necessary in the procedures followed for drug development, toxicology determination, forensic studies, origin verification, quality assurance, etc. Easy determination of active compounds and isolation as well as purification of the same from natural matrices are required, and the possibilities and advantages of HRMS pave the way for improved analysis patterns in phytochemistry. This book is unique in that its sole consideration is on the importance of HRMS in the field of phytochemical analysis. Along with an overview of basic instrumental information, the volume provides a detailed account of data processing and dereplication strategies. Technologies such as bioanalytical techniques and bioassays are considered also to provide support for the functions of the instruments used. In addition, a case study is presented to depict the complete phytochemical characterization of a matrix by HRMS. The book covers processing and computational techniques, dereplication, hyphenation, high-resolution bioassays, bioanalytical screening/purification techniques, applications of gas chromatography-high-resolution mass spectrometry, and more. Key features: Covers the fundamental instrumentation and techniques Discusses HRMS-based phytochemical research details Focuses strictly on the phytochemical considerations High-Resolution Mass Spectroscopy for Phytochemical Analysis: State-of-the-Art Applications and Techniques will be a valuable reference guide and resource for researchers, faculty and students in related fields, as well as those in the phytochemical industries.

Commercial Conflict Management and Dispute Resolution Peter Fenn, 2012-06-25 Commerce is inherently complex and the sums of money involved can be astronomical, so it is no surprise that conflicts and disputes are all too common. There are numerous techniques designed to resolve these problems, and this book summarizes the most important of these, as well as alternative dispute resolution methods. The reader seeking a deeper understanding of these procedures will also find clear explanations of the principles and methods for conflict management, such as negotiation, risk management, mediation and conciliation. As well as outlining these different techniques, guidance on which approach is appropriate in common situations is also given, helping the reader apply what they have learned to the real world. The significance of cultural issues is explained, before the reader is presented with suggestions for how to take these into account. Throughout, the book is illustrated with case studies from examples as diverse as Mumbai's DabbaWalla, The First World War and Terminal 5 at London Heathrow. Written with undergraduate students in mind, this book also serves to give a neat and brief overview for professionals. Those studying or working in commerce generally, construction project management, construction management, and construction law will find this to be an invaluable book.

MRTD (Multi Resolution Time Domain) Method in Electromagnetics Nathan Bushyager,Manos Tentzeris,2022-05-31 This book presents a method that allows the use of multiresolution principles in a time domain electromagnetic modeling technique that is applicable to general structures. The multiresolution time-domain (MRTD) technique, as it is often called, is presented for general basis functions. Additional techniques that are presented here allow the modeling of complex structures using a subcell representation that permits the modeling discrete electromagnetic effects at individual equivalent grid points. This is accomplished by transforming the application of the effects at individual points in the grid into the wavelet domain. In this work, the MRTD technique is derived for a general wavelet basis using a relatively compact vector notation that both makes the technique easier to understand and illustrates the differences between MRTD basis functions. In addition, techniques such as the uniaxial perfectly matched layer (UPML) for arbitrary wavelet resolution and non-uniform gridding are presented. Using these techniques, any structure that can be simulated in Yee-FDTD can be modeled with in MRTD.

Standard and Super-Resolution Bioimaging Data Analysis Ann Wheeler,Ricardo Henriques,2017-10-12 A comprehensive guide to the art and science of bioimaging data acquisition, processing and analysis Standard and Super-Resolution Bioimaging Data Analysis gets newcomers to bioimage data analysis quickly up to speed on the mathematics, statistics, computing hardware and acquisition technologies required to correctly process and document data. The past quarter century has seen remarkable progress in the field of light microscopy for biomedical science, with new imaging technologies coming on the market at an almost annual basis. Most of the data generated by these systems is image-based, and there is a significant increase in the content and throughput of these imaging systems. This, in turn, has resulted in a shift in the literature on biomedical research from descriptive to highly-quantitative. Standard and Super-Resolution Bioimaging Data Analysis satisfies the demand among students and research scientists for introductory guides to the tools for parsing and processing image data. Extremely well illustrated and including numerous examples, it clearly and accessibly explains what image data is and how to process and document it, as well as the current resources and standards in the field. A comprehensive guide to the tools for parsing and processing image data and the resources and industry standards for the biological and biomedical sciences Takes a practical approach to image analysis to assist scientists in ensuring scientific data

are robust and reliable Covers fundamental principles in such a way as to give beginners a sound scientific base upon which to build Ideally suited for advanced students having only limited knowledge of the mathematics, statistics and computing required for image data analysis An entry-level text written for students and practitioners in the bioscience community, Standard and Super-Resolution Bioimaging Data Analysis de-mythologises the vast array of image analysis modalities which have come online over the past decade while schooling beginners in bioimaging principles, mathematics, technologies and standards.

High Resolution Fourier Transform Spectroscopy of Linear Molecules K. A. Mohamed, 2005 High resolution Fourier transform spectra of linear molecules have evoked a great deal of interest during the last several years, which could be seen from the several hundreds of papers published in the journal on the spectra of diatomic and small linear polyatomic molecules. This book describes the advantages of FT Spectroscopy, the techniques employed in absorption and emission spectroscopy, and presents the theoretical models and formulas used in the analyses and interpretation of the spectra. The Perturbations observed in the spectra due to Fermi, Darling-Dennison, Coriolis, and other anharmonic resonances; and vibrational and rotational l-type resonances etc. are discussed with suitable examples. The types of information obtained from FT spectroscopy of two to ten atomic linear molecules, their observed transitions and spectral perturbation etc. are presented along with figures and curves.
